

## TESTIMONIALS FROM *BIOWASH* USERS

Testimonials from users are as varied as the users themselves. Following are just a few that we've received from satisfied customers.

FYI, we update this section periodically. If you would like your experience included, please email us a digital picture of your plant with a short explanation of your success. You may use just your City and State address if you like. *Please Note: Before and after pictures make the most compelling story.*

Jay Coulter, Superintendent Patrick Farms and Quail Hollow Golf Courses, Macomb Mississippi:

*"I have been a superintendent at golf courses in Jackson, Mississippi for the last 22 years. At first I was quite leery about the claims of growth and of health benefits from use of *BioWash* on my greens but, after two weeks, I could see a major difference in the first area where I applied *BioWash*. We increased the areas covered and every single area on which I applied *BioWash* showed a great improvement. I am convinced that if I had been using this product from the beginning of the spring our course problems would have been drastically better. As of 10-30-2011 we are still applying *BioWash* and seeing results on our summer turf. I anticipate a much more productive summer next year. This product will save me time and money."*

Lance Chastain, Chautauqua Hills Farms, SE Kansas:

*"I am using *BioWash* in my drip system. I drip feed 1800 plants twice per week in a regular nutrient regimen. After the fruit sets, I use *BioWash* in my foliar spraying, which I conduct every 10 days. The berries this year are outstanding and much larger than last year; we are producing blueberries the size of a nickel. Our customers are amazed and the word is getting out about how incredible our berries are, grown right here in SE Kansas. Feel free to pass this along."*

George Behling, Ossining NY:

*"Just a short note to update you on my results with *BioWash*..... Amazing! ..... That about sums it up! The corn is approaching 9 feet high, I can't pick the beans fast enough; I have so many tomatoes I have trouble finding people to give them to; on one cherry tomato plant I picked 40 tomatoes and a few days later another 40 were ripe."*

Gary Scott, Mt Dora, FL:

*"I forwarded a note earlier from our grove manager as he said the trees were looking good. Now we have news about how good the improvement is from using the *BioWash*. Last year the grove of 1500 trees produced 1801 boxes of oranges. We removed one third of the lower producing trees in a grove management plan. We sprayed the remaining 2/3rd with *BioWash* and with 500 fewer trees produced 2484 boxes of oranges this year! In other words, last year the average was a yield of about 1.2 boxes a tree; this year 2.4 boxes a tree... just double. This increased the income 37% with 33% less trees."*

Susan Monson, Maine:

*“By the time we got the **BioWash**, the tomato plant leaves were curled and dying. We began spraying and the new leaves growing at the top are fine. There are more blooms and the tomatoes that have been on the plant look good. There are two beginning to turn red. We continue to spray. No bugs and healthy leaves at the top! Will keep you updated.”*

**Gary Reid, Naples FL:**

*“I just took these pictures and they are really amazing. These Hibiscuses are at my home and were purchased from a large nursery. The plants are part of a test I've been conducting for 77 days now and you can really see the difference. UNBELIEVABLE! The Hibiscus on the end is almost 7ft tall with at least 40+ flowers on it. Our **BioWashed** plants look healthy and dark green with no fading or lack of water; the roots are retaining more moisture.”*

*My Brother Chris, who lives in upstate NY, sprayed his Black Eyed Susans with 1 oz per gallon of **BioWash**, starting in June. He sprayed them 3 times, about every 10 days. He hasn't sprayed since and says they still look absolutely green and a perfect yellow.*

*He also says he cannot pick his vegetables fast enough and estimates his production of veggies is at least 50% more than his previous year yields. Just FYI, Chris is also spraying deer plots of chicory and white tail clover. Within 7 days of the first spray he noticed thicker, bright green leaves covering the ground. He said to tell you he loves your **BioWash!**”*
